## AMENDMENT TO THE CLAIMS

1. (Currently Amended) In-a-large-area-radiator-with-a-frontpane and a rear element, wherein spacer elements extending from the front pane to the
rear element keep the front pane apart from the rear element, a gaseous filler is
introduced into a space between the front pane and the rear element and is at a lesser
pressure than a pressure of a surrounding atmosphere, and the front pane is made of
a glass material, the improvement comprising:

at least one of the front pane and the rear element at least partially of one of a thermally tempered glass pane and a chemically tempered glass pane.

- 2. (Previously Presented) In the large-area radiator in accordance with claim 1, wherein a temperature at which a viscosity of the glass material of at least one of the front pane and the rear element is 13.6 dPas (TG temperature) is greater than 550°C.
- 3. (Previously Presented) In the large-area radiator in accordance with claim 2, wherein at least one of a measurement of a wall thickness of at least one of the front pane and the back element is 1.5 mm to 2.1 mm, and a thermal tempering is greater than or equal to 60 Mpa.

4. (Previously Presented) In the large-area radiator in accordance-with-elaim-1, wherein-at-least-one-of-a-measurement-of-a-wall-thickness-of at least one of the front pane and the back element is greater than 0.5 mm, and is tempered by a chemical tempering of more than 160 MPa.

5. (Currently Amended) In a large-area radiator with a front pane and a rear element, wherein spacer elements extending from the front pane to the rear element keep the front pane apart from the rear element, a gaseous filler is introduced into a space between the front pane and the rear element and is at a lesser pressure than a pressure of a surrounding atmosphere, and the front pane is made of a glass material, the improvement comprising:

at least one of the front pane and the rear element each embodied as a glass pane which at least partially has a coating of a ductile polymer material.

6. (Currently Amended) In the large-area radiator in accordance with claim 5, wherein the coating is a film <u>including one</u> of a silicon, a polyurethane and a polymer material, selected from a group of ormoceres.

VO-542 3 MDS/I

- 7. (Previously Presented) In the large-area radiator in accordance-with-claim-6, wherein-the-coating-has-a-thickness-of-more-than-6-μm.
- 8. (Previously Presented) In the large-area radiator in accordance with claim 7, wherein the thickness of the coating is within a range of 6  $\mu$ m and 50  $\mu$ m.
- 9. (Previously Presented) In the large-area structure in accordance with claim 8, wherein a primer is used for bonding the coating to a surface of the glass pane, and the primer is one of a dimethoxydimethyl silane and a hexamethyl disilazane.
- 10. (Previously Presented) In the large-area radiator in accordance with claim 9, wherein the glass pane is at least partially tempered one of thermally and chemically.
- 11. (Previously Presented) In the large-area radiator in accordance with claim 10, wherein the spacer elements are wavy and are arranged

VO-542 4 MDS/I

between the front pane and the rear element, wherein a wavy line extends generally parallel-with-a-planar-extension-of-the-front-pane.

- 12. (Previously Presented) In the large-area radiator in accordance with claim 5, wherein the coating has a thickness of more than 6  $\mu$ m.
- 13. (Previously Presented) In the large-area structure in accordance with claim 5, wherein a primer is used for bonding the coating to a surface of the glass pane, and the primer is one of a dimethoxydimethyl silane and a hexamethyl disilazane.
- 14. (Previously Presented) In the large-area radiator in accordance with claim 5, wherein the glass pane is at least partially tempered one of thermally and chemically.
- 15. (Previously Presented) In the large-area radiator in accordance with claim 1, wherein the spacer elements are wavy and are arranged between the front pane and the rear element, wherein a wavy line extends generally parallel with a planar extension of the front pane.

VO-542 5 MDS/I

16. (Previously Presented) In the large-area radiator in accordance with claim 1, wherein at least one of a measurement of a wall-thickness of at least one of the front pane and the back element is 1.5 mm to 2.1 mm, and a thermal tempering is greater than or equal to 60 Mpa.

## AMENDMENT TO THE DRAWINGS

The attached drawing sheet-includes-changes-to-FIG. 1. This-sheet, which includes only FIG. 1, replaces the original sheet including only FIG. 1. In FIG. 1, the legend "Prior Art" has been added.
